The book begins with the Age of Discovery, when European explorers set out to find new lands and trade routes. This era saw the rise of maritime powers such as Portugal, Spain, and England, and the establishment of colonies in the Americas, Africa, and Asia.

The Age of Enlightenment followed, a time of intellectual and scientific progress that saw the birth of modern science, the rise of democracy, and the spread of education. The Industrial Revolution, which began in the late

18th century, transformed the world economy and led to the rise of new industrial powers such as the United States, Germany, and Japan.

The 20th century was a time of great upheaval and change, with two world wars, the rise and fall of communism, and the development of new technologies such as the computer and the internet. The digital era, which began in the late 20th century, has seen the rise of the internet, social media, and artificial intelligence.
