Pokémon GO is a location-based augmented reality game that has taken the world by storm. In this article, we will provide you with 20 tips and tricks to help you become a better Pokémon GO player.

1. Use an external battery pack

Pokémon GO is a very battery-intensive game. If you plan on playing for extended periods of time, you will need to use an external battery pack to keep your phone charged.

2. Close the app when you're not playing

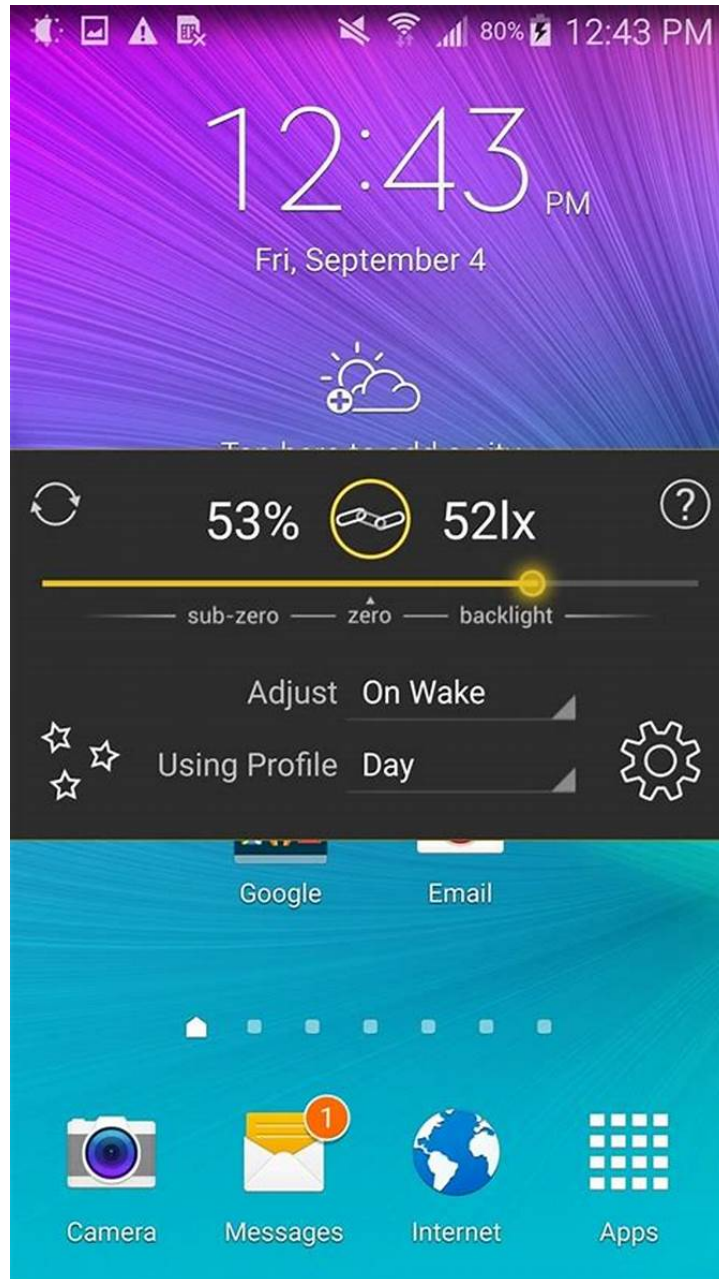

When you're not playing Pokémon GO, be sure to close the app. This will help save your battery life.

3. Turn off augmented reality mode

Augmented reality mode is a great way to experience Pokémon GO, but it can also be a battery drainer. If you're looking to save battery life, you can turn off augmented reality mode in the game's settings.

4. Lower your screen brightness

Your phone's screen brightness is another major battery drainer. To save battery life, you can lower your screen brightness in the game's settings.

5. Walk instead of drive

Driving while playing Pokémon GO is dangerous and illegal in many areas. It's also a great way to waste battery life. Instead of driving, try walking to your next destination. You'll get some exercise and save battery life at the same time.

6. Use a battery-saving app

There are a number of battery-saving apps available in the app store. These apps can help you extend your phone's battery life by optimizing your settings and killing unnecessary apps.

7. Charge your phone at every opportunity

Whenever you have a chance, plug your phone in to charge it. This will help you avoid running out of battery when you're in the middle of playing Pokémon GO.

8. Catch Pokémon near PokéStops

PokéStops are a great place to catch Pokémon. They also provide you with items that can help you save battery life, such as Poké Balls and Potions.

9. Use lures and incense to attract Pokémon

Lures and incense are items that you can use to attract Pokémon to your location. This can be a great way to catch Pokémon without having to walk around. However, lures and incense do use battery life, so be sure to use them sparingly.

10. Join a gym

Gyms are a great way to earn experience and rewards. They also provide you with a place to charge your phone. If you're looking to save battery life, you can join a gym and charge your phone while you're defending it.

11. Battle in gyms

Battling in gyms is a great way to earn experience and rewards. It can also help you save battery life. When you battle in a gym, your phone will automatically enter power saving mode.

12. Use a power bank

A power bank is a portable battery that you can use to charge your phone. Power banks are a great way to extend your phone's battery life when you're on the go. If you're planning on playing Pokémon GO for extended periods of time, you should consider investing in a power bank.

13. Turn off notifications

Pokémon GO can send you a lot of notifications, which can drain your battery life. To save battery life, you can turn off notifications in the game's settings.

14. Use a data saver

Pokémon GO uses a lot of data, which can drain your battery life. To save battery life, you can use a data saver app or enable data saver mode in your phone's settings.

15. Clear your app cache

Over time, your Pokémon GO app cache can become cluttered with unnecessary files. This can slow down your game and drain your battery life. To clear your app cache, go to your phone's settings and select "Apps" -> "Pokémon GO" -> "Storage" -> "Clear Cache".

16. Uninstall and reinstall the app

If you're still having battery life issues, you can try uninstalling and reinstalling the Pokémon GO app. This will remove all of the app's data from your phone, so be sure to back up your account before you do this.

17. Use a custom ROM

Custom ROMs are modified versions of the Android operating system. Some custom ROMs are designed to improve battery life. If you're rooted, you can try installing a custom ROM to see if it improves your battery life.

18. Get a new phone

If all else fails, you may need to get a new phone. Newer phones tend to have better battery life than older phones. If you're serious about playing Pokémon GO, you should consider getting a phone that has a long battery life.

Pokémon GO is a great game, but it can be a battery drainer. By
